# WEAVER SCOPES

## For Rifles of Light Recoil

B4 Scope with  
Type N Mount

The B6 is similar in appearance except two inches longer forward of the adjustment turret.

- 1. Achromatic lens system consisting of seven lens elements.
- 2. Sturdy, compact.
- 3. Large field.
- 4. Accurate, guaranteed windage and elevation adjustments.
- 5. No front sight or rear sight, just the crosshairs to align on the target.
- 6. Both target and crosshairs are clear and sharp, never blurred.

The four power Model B4 and six power B6 Scopes were developed especially for .22 rim fire rifles, Hornets, Bees and similar calibers. The B Models are of improved design and replace the Model G Weaver Scopes. The design, mechanically and optically, is a modern development and superior to any formerly used in .22 scopes. The B Models are light, compact with excellent optical qualities.

### OPTICAL SYSTEM

The optical systems have seven lens elements and are achromatic, a feature not found in other scopes of this type. This lens system gives more light, sharper definition, clearer colors, and larger field of view than lens systems formerly used. Model B Scopes are limited to use on light recoil rifles because they are used a relatively short distance, about two inches, from the eye and not because of any lack of strength.

### SPECIFICATIONS

	B4	B6
TUBE, blued, dia.	.750 in.	.750 in.
EYE PIECE, dia.	.955 in.	.955 in.
LENGTH, overall	11½ in.	13½ in.
EYE DISTANCE	2 in.	2 in.
FIELD OF VIEW	30 ft.	20 ft.
WEIGHT, scope only	6 oz.	7 oz.
RETICULE—Crosshair		
FOCUS—adjusts to user's vision.		
ADJUSTMENTS—Internal, friction lock, graduated 1 minute (1" per 100 yards) B4, ½ minute B6.		

They have the built-in sturdiness characteristic of all Weaver Scopes.

### ADJUSTMENTS

Windage and elevation adjustments, of guaranteed accuracy, are internal and fully protected. The B Models have friction lock adjustments that are graduated and can be set with coin or cartridge rim. Windage and elevation movements are entirely independent and designed to give positive and exact sight changes with no play or lost motion. The B4 windage and elevation adjustments give a 1 inch sight change per graduation at 100 yards, and the B6 graduations ½ inch at 100 yards.

### ACCURACY

B Model Scopes, while moderate in price, are actually precision instruments. Sturdy, compact construction makes the Model B a real hunting scope. The B4 has enough magnification for nearly all shooting but not too much for easy use offhand. It will make your shooting a lot more fun and a lot more effective whether it is just ordinary plinking or serious work at crows, hawks, squirrels, woodchucks, or jack rabbits. The B6 is somewhat of a specialized scope for use where most of the shots are at long range, from a rest or prone position.
